

FRONTLINE PROTECTION FROM SCATTER RADIATION

Fluoroscopy serves a critical role in helping you help your patients during image guided surgery. Unfortunately, it also puts you and your staff at serious health risks related to repeated exposure to scatter radiation.

Traditional solutions are limited. Lead shield positioning often leaves gaps in scatter radiation protection and inhibits workflow. And personal protective equipment can be cumbersome, increase musculoskeletal stress and has incomplete protection.

Improve protection – and flexibility – with the Steradian Shield.

The Steradian Shield is small and portable. The shield's vertical frontline positioning strategy provides oversized protection against the scatter radiation cloud often missed by other products.

- Reduce scatter radiation exposure by up to 78%
- View, access and maintain workspace and workflow
- Use individually, or in multiples with other protective devices to maximize scatter protection

Designed to defend

The Steradian Shield reliably absorbs and blocks scatter radiation emitting through the vertical gap between the image intensifier and the patient, creating a protection zone for healthcare professionals.

Easy to use

Measuring 6 x 8 inches and weighing 0.30 pounds, the Steradian Shield can be easily moved or repositioned without obstructing views or workflow. The adjustable adhesive base rotates on its axis vertically and laterally, and allows the shield to be easily removed and reinstalled as needed.

Proven protection

- Up to 78% protection against scatter radiation when used alone – and even more when used in tandem with traditional horizontal protection pads and PPE
- 0.18 mm lead equivalent
- Fluid barrier protection

Easy to adjust

- Moves 130-degree up and down
- Detachable 360-degree rotating and locking base
- Repositionable adhesive pad
- Small (6"x8") and lightweight (0.30 lb)

Radux Devices' mission is to protect healthcare professionals today for healthier lives tomorrow.

The company develops innovative medical devices that intuitively improve procedural performance and workflow, while delivering advantageous outcomes for physicians, nurses and hospitals.
