PROFESSIONALS
TODAY
FOR HEALTHIER
LIVES
TOMORROW**

Radux Devices was founded with the mission to protect our healthcare workforce from dangerous occupational hazards. We believe that physicians, nurses, & technicians should be able to safely work without risking high levels of exposure to scatter radiation or suffering from the daily wear-and-tear of musculoskeletal stress & fatigue.

ADDRESS KEY CHALLENGES FACING HEALTHCARE SYSTEMS

Workforce & Labor Supply – Attracting & retaining sufficient healthcare professionals drains hospital resources, especially given today’s increased awareness of the many known occupational hazards. Implementing Radux’s products demonstrates to your existing & future staff that you take their safety seriously & will not compromise their health while they dedicate their careers to providing the best patient outcomes.

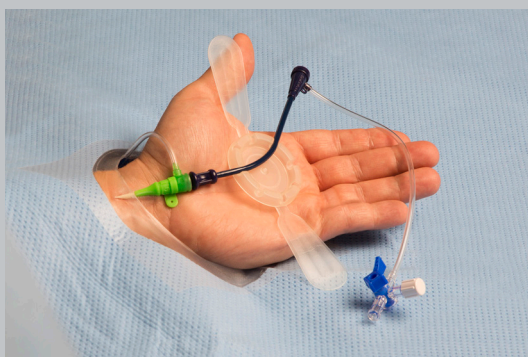

Inflation & Cost Management – Reducing overall costs & increasing revenue is a constant pressure point for hospitals, particularly as they seek to deliver value-based care. Radux’s products offer better value for money than competitor products & protecting the workforce can reduce the sizable financial impact felt by staff absences due to medical leave & burnout.

Operational Performance – Maximizing workflow efficiencies & reducing lengths of patient hospital stays are two areas requiring regular review to enhance operational performance in hospitals. Radux’s products strengthen operational performance by increasing same-day patient discharge rates & improving workflow & sterility during complex procedures.

STERADIAN SHIELD™

- The only shapeable attenuation pad to offer both vertical & horizontal radiation protection
- Block dangerous exposure gaps to the head & upper body
- Easily reposition to accommodate a variety of procedure types & surgical environments

STANDTALL™

- The only external vascular sheath extender to address complex vascular access procedures
- Decrease physician musculoskeletal stress, ergonomic fatigue, & radiation exposure with improved positioning
- Preserve sterility, improve reproducibility, & maintain physician hand dominance

LEFT RADIAL SYSTEM (STANDTALL™ + LASS)

- The only complete & easily reproducible solution for left radial vascular access
- Redirect workflow to the patient's right side to decrease physician radiation exposure & improve ergonomics
- Lower costs by increasing left radial percentages & same-day patient discharges while reducing patient complications

Radux Devices' mission is to protect healthcare professionals today for healthier lives tomorrow.

The company develops innovative medical devices that intuitively improve procedural performance and workflow, while delivering advantageous outcomes for physicians, nurses, and hospitals.
